Dear Stan,

I received your package but the former was not there!!!! One end of the package was open and nothing is there. I contacted UPS and they will send someone to Drexel to inspect the package and then send you the claim forms.

Well, now we have pretty much nothing to evaluate. How would you like to pursue this? Please let me know.

I agree with you that the final product will be made using slip casting and then sintering. I believe that before moving to the slip casting step, I would recommend that we try to make some sintered solid ones and test the sintered material. Please let me know your thought.

I look forward to hearing from you.

Sincerely,

Tamer
